In their first year, your baby will make a range of sounds as they acquire the skills necessary for speech. What do these sounds mean?

This cheat sheet will help you decode what your baby is trying to tell you.

Playing with music is an easy way to interact with your baby in his first year and can help set the stage for lifelong musical development. Fun tunes will brighten his mood, benefit his brain, and boost his language skills. The holidays are the perfect time to introduce your child to festive new songs!

Learn more about the benefits of music for child development at:

You can expect your child to say their first words between six and nine months. Although she may just be repeating sounds without knowing their meaning, this indicates she has developed a full repertoire of sounds which is a major linguistic milestone.

Check out this stage-by-stage guide of what you will hear and how to encourage your baby's development: <https://www.parenting.com/activities/baby/baby-speech-milestones/>
